

To preserve the full effect of Silidox Tex, do follow these care guidelines.

- Some fabrics may have been pre-treated with chemicals. For Silidox Tex to take full effect, these fabrics will have to be washed before application of Silidox Tex.
- For industrial application, you can treat fabrics through the foulard process. We are happy to assist and advise you on this.
- Once coated, fabrics can be washed by machine and hand-washed and tumble dried. As Silidox Tex is resistant to most chemicals, you can wash with mild detergents. However, there are some things you can do to preserve its full effect and ensure the coating lasts long:
 - Avoid bleach, fabric softener and harsh detergents
 - Wherever possible, wash in cold water.
 - Tumble dry under normal heat – and actually this will lead to higher water repellency, so we highly advise this!
 - Avoid dry-cleaning but if you do, it can withstand approximately 15 dry clean rounds before the effect wears off.
 - When ironing coated fabrics, iron on low heat.
- Please be advised that Silidox Tex works on most fabrics but it works better on some fabrics than others. Silidox Tex is not water/oil/stain-proof, but, water/oil/stain-resistant. Coatings which are water/oil/stain-proof are usually toxic so be aware!
